

Task

Please implement an iOS application that loads the closest 5 Foursquare venues near the current location. The goal of the task is to demonstrate your ability to implement CoreData, custom UI components, and Web Services integration.

Details and limitations:

- The application must not use any third-party iOS libraries and frameworks.
- There should be two screens switched with UISegmentedControl:
 - List with the closest 5 venues
 - "About us" screen with sample text
- The data has to be persisted using CoreData. When the application is loaded in offline mode, it should display the venues that were loaded last time.
- The application has to support the iPhone only in portrait mode.
- The candidate can make assumptions about everything that is not clear in the description of the task.

Deadline: 1 week
